company profile

ALUMINCO was established in 1982 and marked a new era in the aluminium production. Located in Inofita Industrial Zone – 40 km outside of Athens, it is ideally placed to serve the key markets of Europe as well as the Near and Far East.

From the beginning, the company's dedication was to combine tradition with modern technology. Due to the continuous efforts for perfecting quality and design, the company has been established as the leader in the cast aluminium sector with international recognition.
By using some of the most sophisticated casting equipment available, **ALUMINCO** has gained recognition in both the local and overseas markets.
ALUMINCO has also been awarded the **ISO 9001** as well as the **QUALICOAT** and **BUREAU VERITAS** quality certificates whilst the company's care for the environment has been accredited by the **ISO 14000** .

Today **ALUMINCO** products are distributed in more than **60 countries** all over the world, and its currently involved in big project both in Greece as well as overseas Keeping in mind the demand for quality products and having as a goal to be always ahead of these demands as well as developing a reliable customer service, the company has recently completed a three year investment plan of a new 25.000 sq, m. plant and machinery.

THE PRODUCT
ALUMINCO launched for the first time into the market, a new generation of cast aluminium products incorporating modern architectural requirements with classic design.

- In 1982 begins the production and marketing of a wide range of products such as cast aluminium railings, fences, gates and garden furniture.
- In 1984 the company extends its production with cast aluminum lighting posts, thus covering the needs of hotels, public areas and commercial centers.
- In 1990 for the first time in Greece, **ALUMINCO** introduces the first aluminum panels
- By 2000, five new series of panels are included in the panel range, the **pressed panels**, the **traditional panels**, the **traditional safety doors**, the **security doors**, and the **inox panels**. Each one an achievement of each own.
- In 2003, **ALUMINCO** extends its production in extrusion profiles and introduces a full range of aluminium profile systems, thus strengthening the position of the company in the market.
  Today and in the future **ALUMINCO** will continue to be a pioneer never failing to pursue high quality and service credability.

static tests

BVLPR 924.037
OBJECTIVE: Tests on Railings according to the French Standard NF P01-013/1985

1. Static horizontal outward test.

Test phase	Deformation in mm				Standard NF P01-013
	Pos.1	Pos.1	Pos.1	Pos.1	
Loading of 3 minutes	3	13	15	a2	
Loading of 15 minutes	4	22	23	3	
Remaining deformation	0,3	0,5	0,6	0,1	<8mm

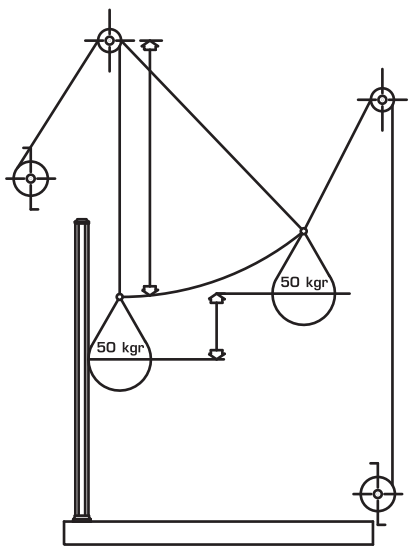
www.alumineobg.com

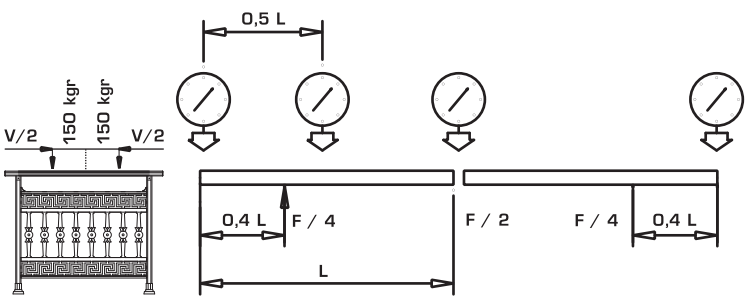
2. Static horizontal inquards test. Deformation after 1 min loading=4,6mm.
Remainig deformation -0.
Allowed (NF P01-13) = < 3 mm.

3. Static vertical test.
Remaining deformation = 0
Allowed (NF P01-13) = < 3 mm.

dynamic tests

There was no fall of debris to outside space.





Conclusions

From the above results on rails which were tested it is clear that these products satisfy the French's Standards NF P01-013 in rails for private and public use.

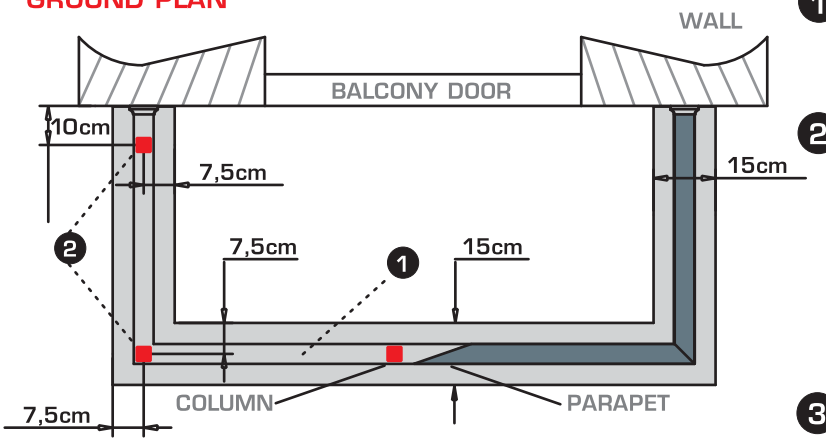
ways to measure & install rails - gates

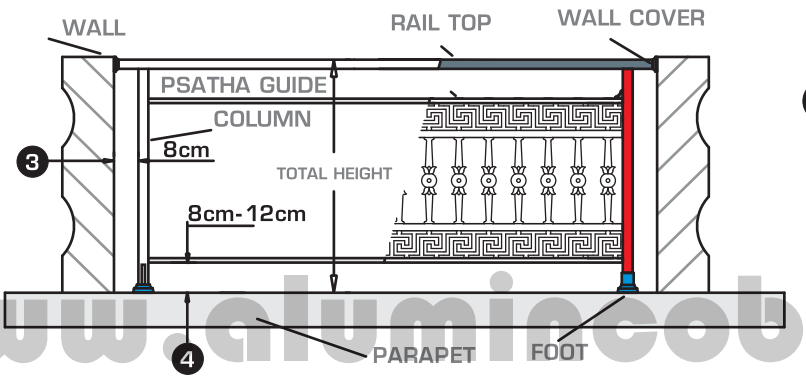
ways to measure

GROUND PLAN



1. The rail is installed in the center of the balcony parapet.
2. The measurements are taken from the wall to the centre of the column and afterwards to the center of the next column.
3. The distance between the wall and the external side of the column must be 8cm.

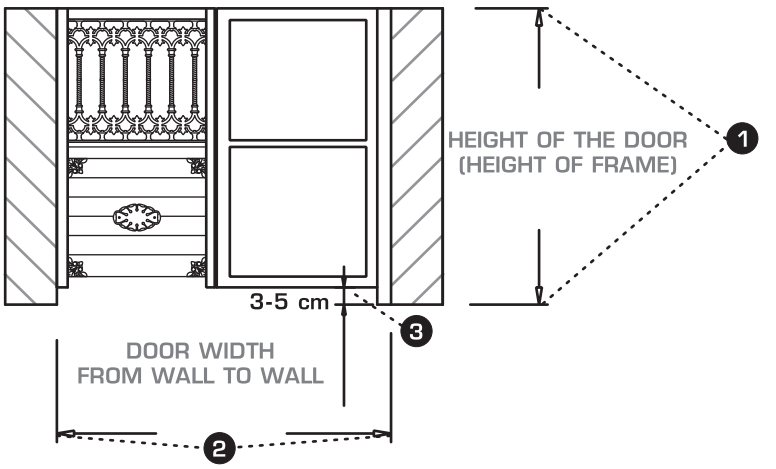
FRONT VIEW



4. The space between the ground and the bottom of the guide must be:
-minimum 8cm
-(if we are using a supporting foot)
-maximum 12cm.

www.aluminecobg.com

FRONT VIEW



NECESSARY INFORMATION REQUIRED FOR GATES

- Opening gate - Sliding gate.
- Single - Double.
- Opening direction of the gate when looking on from the outside To the left To the right.

1. The height o the gate is measured from the ground to the top part of the frame.
2. The width is measured from wall to wall.
3. The space between the ground and the bottom part of the gate should be between 3cm to 5cm.

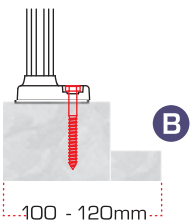
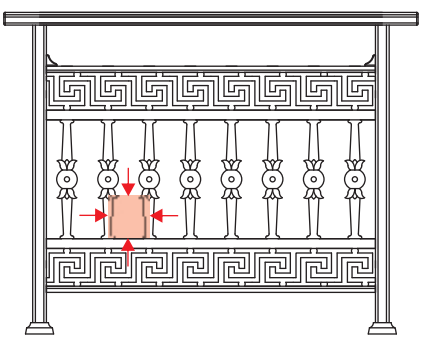
www.aluminoob.com

A Suggested parapet width 150mm. Installation of supporting base should be in center alignment.



B In case of parapet width 120mm, installation of supporting base should be 10mm from the edge.



REGULATIONS

According to the international building regulations, there should not be any greater opening than 10X 10cm. Furthermore, there are no horizontal sections in any of the models, which would create a step for a child and thus endanger his safety.
In the case of AVANT GARDE, the bottom horizontal part is 45cm which complies with the safety rules.
